

CRPA Frequency Plan

Selected Zero-IF architecture - two RF paths per antenna element

Chain 1 - L1

Chain 2 - L2 + L5 shared path

Grouping decision: L1 is kept separate; L2 and L5 share one wider RF chain.

This gives two RF paths per antenna element and 16 coherent receive paths for the 8-element array.

Selected output rates follow ADRV9026 example receiver profiles: 60 MHz BW -> 76.8 MS/s and 100 MHz BW -> 122.88 MS/s.
